BIBLIOGRAPHIA INVERTEBRATORUM AQUATICORUM CANADENSIUM (BIBLIOGRAPHIA) is published as a series of volumes of selected information from the computerized Bibliography of Canadian Aquatic Invertebrates maintained by the National Museum of Natural Sciences, National Museums of Canada. It encompasses three general areas: an index of generic names (*Index Generum*); a list of the references used in BIBLIOGRAPHIA (*Index Bibliographicus*); and a compilation of published information on species, by taxonomic group (*Synopsis Speciorum*).

Volumes are published at irregular intervals. English and French texts appear in each volume. Copies of individual volumes are available without charge by mail from the National Museum of Natural Sciences, Ottawa, Canada K1A 0M8.

BIBLIOGRAPHIA INVERTEBRATORUM AQUATICORUM CANADENSIUM (BIBLIOGRAPHIA) est une collection de volumes qui contiennent des renseignements choisis provenant de la Bibliographie informatisée des invertébrés aquatiques du Canada, tenue par le Musée national des sciences naturelles, Musées nationaux du Canada. Cette bibliographie comprend trois éléments principaux: une liste générique (*Index Generum*); une liste de références utilisées dans BIBLIOGRAPHIA (*Index Bibliographicus*); et une compilation des informations publiées sur les espèces, par groupe taxinomique (*Synopsis Speciorum*).

Ces volumes ne sont pas publiés régulièrement. Les textes paraissent en français et en anglais dans chaque volume. Des exemplaires de certains volumes sont disponibles sans frais. Prière d'écrire au Musée national des sciences naturelles, Ottawa, Canada K1A 0M8.

PREFACE

Publications on aquatic invertebrates of Canada first appeared in the late eighteenth century. During the early days, taxonomic studies dominated the literature, and many of these were published as part of the scientific results of expeditions or in monographs of taxonomic groups. With the advance of science, the scope of invertebrate studies has expanded to cover a large number of different fields, such as ecology, fisheries, physiology, biochemistry and genetics. Consequently, results of these studies have been published in hundreds of different kinds of scientific journals and reports, some of which are obscure and difficult to obtain. It has thus become tremendously difficult to assemble available published information on the aquatic invertebrate fauna of our country. In the past, bibliographers attempted to compile information on these animals but most of them limited their scope to a taxonomic group, an ecological unit, or a special topic.

The Bibliography of Canadian Aquatic Invertebrates, *Bibliographia Invertebratorum Aquaticorum Canadensium*, was started in 1973, and in 1975 became a special project of the Canadian Oceanographic Identification Centre; since 1979 it has been carried on by the Invertebrate Zoology Division of the National Museum of Natural Sciences. The purpose of this project is to document as many as possible of the scientific names applied to Canadian marine and freshwater invertebrates, to establish a list of currently recognized species, and to compile relevant published data, such as records of distribution and categories of studies for each species. All Recent free living and ectoparasitic species are included but all insects, protozoans, and endoparasites are excluded.

Bibliographia deals with all marine and freshwater environments in Canada. However, in order to present a complete synopsis of the aquatic invertebrate fauna of northern North America, Alaska, Puget Sound, Lake Champlain and the whole of the Great Lakes, except Lake Michigan, are included.

In the freshwater environment, all permanent and temporary inland water bodies are considered. Thirteen regions are recognized based on political boundaries, namely: British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, Quebec, New Brunswick, Nova Scotia, Prince Edward Island, Newfoundland, Alaska (including the Aleutian Islands east of 170°W), Yukon Territory, and Northwest Territories, and two based on natural water bodies: St. Lawrence Great Lakes and Lake Champlain.

In the marine environment we have covered localities (from about 48°W to 170°W) within the 200-metre bathymetric contour but including deeper waters of embayments and passages between islands. Three regions are recognized: Pacific, Arctic, and Atlantic. The Pacific Region covers the coastal waters from Cape Flattery, Washington to the Aleutian Islands, Alaska,

PRÉFACE

Les premières publications sur les invertébrés aquatiques du Canada ont paru vers la fin du XVIII^{e} siècle. Au début, la littérature sur cette question était dominée par les études taxinomiques, dont beaucoup étaient publiées sous forme de tranches de résultats d'expéditions scientifiques, ou de monographies sur des groupes taxinomiques. Avec les progrès de la science, le champ des études des invertébrés s'est étendu à un grand nombre d'autres domaines, dont l'écologie, les pêcheries, la physiologie, la biochimie et la génétique. Par conséquent, les résultats de ces études ont paru dans des centaines de types différents de revues et de rapports scientifiques, dont certains sont peu connus et d'accès difficile. Il est donc devenu extrêmement difficile de rassembler toute la documentation publiée sur les invertébrés aquatiques de notre pays. Par le passé, des bibliographes se sont efforcés de réunir l'information sur ces animaux mais, dans la plupart des cas, ont limité leurs travaux à un groupe taxinomique, à une zone écologique ou à un sujet particulier.

Les travaux sur la Bibliographie des invertébrés aquatiques du Canada, *Bibliographia Invertebratorum Aquaticorum Canadensium*, ont commencé en 1973; en 1975, ils devenaient un projet spécial du Centre canadien d'identification océanographique et, depuis 1979, c'est la Division de la zoologie des invertébrés, au Musée national des sciences naturelles, qui s'en charge. Ce projet a pour but de recueillir le plus grand nombre possible de noms scientifiques qui désignent les invertébrés d'eau salée ou d'eau douce du Canada, de dresser une liste des espèces actuellement reconnues et de réunir les données publiées pertinentes, notamment celles concernant la répartition et les études relatives à chacune de ces espèces. Le projet embrasse toutes les espèces d'invertébrés indépendants et ectoparasites du Quaternaire récent, mais ne comprend pas les insectes, les protozoaires et les endoparasites.

La *Bibliographia* porte sur tous les milieux d'eau salée et d'eau douce du Canada. Toutefois, afin que la synopsis englobe la faune des invertébrés aquatiques de toute l'Amérique du Nord septentrionale, notre étude embrasse également l'Alaska, Puget Sound, le lac Champlain, et les Grands Lacs, sauf le lac Michigan.

Dans les eaux douces, toutes les masses d'eau permanentes et temporaires de l'intérieur sont comprises. Le territoire étudié est subdivisé en treize régions correspondant au découpage politique: Colombie-Britannique, Alberta, Saskatchewan, Manitoba, Ontario, Québec, Nouveau-Brunswick, Nouvelle-Écosse, Île-du-Prince-Édouard, Terre-Neuve, Alaska (y compris les Aléoutiennes à l'est de 170° 0), Territoire du Yukon et Territoires du Nord-Ouest, et deux régions correspondant aux grandes masses d'eau: les Grands Lacs du Saint-Laurent, et le lac Champlain.

En ce qui concerne les eaux salées, notre travail englobe tous les endroits situés à l'intérieur de la courbe bathymétrique de 200 m (entre approximativement 48° et 170° 0), mais aussi les eaux profondes des enfoncements du littoral et des passages entre les îles. Le territoire étudié est subdivisé en trois régions correspondant aux trois océans; Pacifique, Arctique et Atlantique. La région du

including Juan de Fuca Strait, Puget Sound, and the Gulf of Alaska. The Arctic Region, from the Aleutian Islands to Cape Chidley, Labrador, includes the eastern Bering and Chukchi seas, and southern Beaufort Sea, and the coastal waters around and passages between the Canadian arctic islands. The Atlantic Region, from Cape Chidley to Browns Bank and the mouth of the Bay of Fundy, includes the Gulf of St. Lawrence and the Laurentian Channel.

Conventional tools, such as *Zoological Record* and *Biological Abstracts*, were used to search the literature. Complete runs of more than forty scientific journals which have been the primary sources for publications on aquatic invertebrates in general and Canadian species in particular were scanned, including: all publications in zoology by the National Museums of Canada and the United States National Museum; all publications by the Fisheries Research Board of Canada, *Canadian Journal of Zoology* and *The Canadian Field-Naturalist*, in all their different incarnations; and *Le Naturaliste canadien*. Subsequently, references cited in the publications reviewed were checked. We have striven to search all literature of aquatic invertebrates up to and including 1976 but realize that no endeavour of this sort could ever be complete*. In all we have reviewed works published in more than 700 different scientific journals and expedition reports and in numerous books, and abstracted relevant information from about 5 000 articles. Updating of our list of references to certain taxonomic groups has been carried on in conjunction with the preparation of several publications for *Bibliographia*, increasing the number of articles to about 6 500. This information is stored in the computer system of the Canadian Heritage Information Network of the National Museums of Canada.

With the computer facilities, three kinds of publications are being produced: a generic list, *Index Generum* (Volume 1), a reference list, *Index Bibliographicus* (Volume 2), and a series of species synopses of the taxonomic groups, *Synopsis Speciorum* (Volume 3 *et seq.*). In 1982, the inventory contained more than 17 000 species names in about 4 700 genera, from almost all phyla of the Animal Kingdom. Obviously, we will need the help of specialists to clarify the validity of some of these names, and we invite scholars to author publications in the *Synopsis Speciorum* series.

This bibliography programme would not have been accomplished without the collective efforts of many people. In 1973, Diana Laubitz started to compile a bibliography of Canadian marine benthic invertebrates. This project was expanded to its present form in 1975 by Chang-tai Shih, Diana Laubitz, and Ian Sutherland. Nishi Sharma (1975-1980) and Penelope Adams (summers of

*For recent publications, computerized retrieval systems are available, through, for instance, Canada Institute for Scientific and Technical Information (CISTI) of the National Research Council of Canada.

Pacifique englobe les eaux côtières depuis le cap Flattery (État de Washington) aux îles Aléoutiennes (Alaska), y compris le détroit de Juan de Fuca, Puget Sound, et le golfe d'Alaska. La région de l'Arctique s'étend des îles Aléoutiennes au cap Chidley (Labrador), y compris la partie orientale de la mer de Béring et de la mer des Tchouktches, et la partie méridionale de la mer de Beaufort, ainsi que les eaux côtières entourant les îles de l'Arctique canadien et les passages entre celles-ci. La région de l'Atlantique s'étend du cap Chidley (Labrador) jusqu'au banc de Browns et à l'embouchure de la baie de Fundy, y compris le golfe du Saint-Laurent et le chenal Laurentien.

Pour orienter nos recherches, nous avons consulté des volumes de références, comme le *Zoological Record* et les *Biological Abstracts*. De plus, nous avons dépouillé la collection complète de plus de quarante revues scientifiques, qui ont constitué les principales sources de publications sur les invertébrés aquatiques en général et sur les espèces du Canada en particulier, notamment: toutes les publications sur la zoologie des Musées nationaux du Canada et de l'"United States National Museum"; toutes les publications du Conseil de recherches sur les pêcheries du Canada, le *Journal canadien de zoologie* et le *Canadian Field-Naturalist* dans tous leurs avatars, et *Le naturaliste canadien*. Il s'agissait ensuite de retracer les références indiquées dans les publications dépouillées. Nous avons essayé d'examiner toute la documentation au sujet des invertébrés aquatiques publiée jusqu'en 1976 inclusivement, mais nous nous rendons compte qu'aucune tentative de ce genre ne sera jamais entièrement couronnée de succès*. En tout, le dépouillement à porté sur les travaux publiés dans plus de 700 revues scientifiques et rapports d'expéditions et dans de nombreux ouvrages, et quelque 5 000 articles ont fourni des données pertinentes. Concurremment avec la préparation de plusieurs publications pour *Bibliographia* nous avons aussi mis à jour notre liste de références pour certains groupes taxinomiques, et la liste compte maintenant près de 6 500 articles. Ces informations sont stockées dans la banque du Réseau canadien d'information sur le patrimoine, aux Musées nationaux du Canada.

Nous servant des ressources de l'informatique, nous produisons trois types de publications: une liste générique, *Index Generum* (Volume 1); une liste de références, *Index Bibliographicus* (Volume 2); et une série de synopsis sur les espèces des groupes taxinomiques, *Synopsis Speciorum* (Volume 3 et suivants). En 1982, nos données renfermaient le nom de plus de 17 000 espèces appartenant à quelque 4 700 genres provenant de presque tous les embranchements du règne animal. Evidemment, il nous faudra obtenir l'aide de spécialistes pour contrôler la validité de certains de ces noms. Des chercheurs seront invités à écrire des textes pour la série des *Synopsis Speciorum*, et ils auront accès à cette fin aux données informatisées.

Cette bibliographie n'existerait pas sans les efforts concertés d'un grand nombre de personnes. En 1973, Diana Laubitz a commencé à établir une bibliographie des invertébrés benthiques du Canada. En 1975, Chang-tai Shih, Diana Laubitz et Ian Sutherland étendirent la portée de ce projet et lui donnèrent sa forme actuelle. Nishi Sharma (1975-1980) et Penelope Adams

*Pour retracer les publications récentes, il existe des systèmes informatiques de recherche documentaire, comme celui de l'Institut canadien de l'information scientifique et technique (ICIST), au Conseil national de recherches du Canada.

1975-1978) undertook the basic search and review of the literature. Wendy Antoine organized the data for computer input, operated the computer terminal, and maintained the *Bibliographia* data base. Rolande Gaulin and Judith Price assisted in entering new references to our computerized file.

Fahmida Rafi, Judith Fournier, Muriel Smith, Peter Frank, Rama Chengalath, Jacqueline Madill, and Jane Topping, all of the Invertebrate Zoology Division, and Stephen Nash, Deanna Beckett, Dale Johannsen, Eva and Paul Laubitz, Lynn MacBeath, Stephen McKeen, Akshay Sharma, and Catherine Symons have contributed to our work and are duly acknowledged. The maps were prepared by Sally Gadd with the advice of Brian Cromie of the Department of Energy, Mines and Resources.

We thank Audrey Dawe, former Chief Librarian, Valerie Monkhouse, Director of Library Services, and Arch Stewart, Natural Sciences Librarian, of the National Museums of Canada, and their staff for cheerfully accepting our extraordinary demands on their service; Peter Homulos, Ray Bellamy and the staff of the Canadian Heritage Information Network, for assisting us in computer programming and data processing; and Eleanor Fenton, former Publications Coordinator of the National Museum of Natural Sciences, who advised and assisted in the production of *Bibliographia*. For their encouragement and trust during the course of our seemingly never-ending preparation of the bibliography, we would like to express our deep appreciation to Daniel Faber, formerly Chief of the Canadian Oceanographic Identification Centre, Charles Gruchy, Assistant Director, and Louis Lemieux, former Director of the National Museum of Natural Sciences.

(étés 1975-1978) se sont mise à dépouiller et à passer en revue des éléments de la documentation. Wendy Antoine a organisé les données à informatiser, a fait fonctionner le terminal, et a tenu à jour la base des données de la *Bibliographia*. Rolande Gaulin et Judith Price nous ont aidé dans le processus d'informatisation des nouvelles références.

Fahmida Rafi, Judith Fournier, Muriel Smith, Peter Frank, Rama Chengalath, Jacqueline Madill et Jane Topping, tous de la Division de la zoologie des invertébrés, et Stephen Nash, Deanna Beckett, Dale Johannsen, Eva et Paul Laubitz, Lynn MacBeath, Stephen McKeen, Akshay Sharma et Catherine Symons ont contribué à nos travaux et ils ont droit à leur part de gratitude. Sally Gadd a préparé les cartes et a été conseillée par Brian Cromie du ministère de l'Energie, des Mines et des Ressources.

Notre reconnaissance va également à Audrey Dawe, ancienne bibliothécaire en chef, à Valerie Monkhouse, directrice des Services de bibliothèque, et à Arch Stewart, bibliothécaire des sciences naturelles, des Musées nationaux du Canada, et à leur personnel, pour avoir acceuilli avec une grande gentillesse nos demandes de services exceptionnelles; à Peter Homulos, à Ray Bellamy et au personnel du Réseau canadien d'information sur le patrimoine, pour nous avoir aidé à programmer et à traiter les données; et à Eleanor Fenton, ancienne coordonnatrice des publications du Musée national des sciences naturelles, pour ses conseils et son aide pendant la production des premiers volumes de la *Bibliographia*. Enfin, pour leurs encouragements et leur confiance tout au long de notre interminable travail de préparation de la Bibliographie, nous tenons à exprimer nos profonds remerciements à Daniel Faber, autrefois chef du Centre canadien d'identification océanographique, à Charles Gruchy, directeur adjoint, et à Louis Lemieux, ancien directeur du Musée national des sciences naturelles.

INTRODUCTION

The subclass Branchiopoda consists of four sharply defined orders, Anostraca, Notostraca, Conchostraca and Cladocera. The first three orders are considered primitive and are characteristic inhabitants of temporary habitats, especially during spring and early summer. They are found exclusively in fresh water with no true marine representatives, and are absent from running waters. The Anostraca (fairy shrimps) have stalked compound eyes and no carapace. The Notostraca (tadpole shrimps) have sessile compound eyes and a large carapace. The Conchostraca (clam shrimps) are laterally compressed, have sessile compound eyes, and a carapace consisting of two lateral valves. The members of these three orders have appendages which are leaf-like in appearance and therefore they are sometimes collectively called phyllopods, a term that is not currently used in systematic nomenclature for a definite taxonomic category.

The members of the order Cladocera (water fleas) are mainly inhabitants of fresh water, only three genera (*Podon*, *Evadne* and *Pleopis*) being found in Canadian marine waters. Of the freshwater species a few are limnetic, living in the open water of lakes, and these are normally very transparent and nearly colourless. The majority are found in ponds or the littoral region of large water bodies and can be coloured yellow, brown or red. Because most of the studies on fresh waters were conducted in open water, a disproportionately high number of occurrence records in this synopsis pertain to limnetic species, although they are relatively few in number.

The North American Cladocera systematics has changed considerably in the last few decades. Where once many cladoceran species were believed to be cosmopolitan, recent studies of the common genera *Alona*, *Bosmina*, *Chydorus*, *Daphnia*, *Diaphanosoma* and *Eurycercus* have demonstrated that the distribution of several species is quite circumscribed and confined to specific geographic regions (Brooks, 1957; Chengalath and Hann, 1981A, 1981B; Deevey and Deevey, 1971; Frey, 1975, 1978, 1980, 1982; Korinek, 1981). Up to now many species described from Europe have been claimed to occur in North America as well. However, careful study and comparison of populations from the two continents have shown that several species are in fact different in morphological features (Brooks, 1957; Michael and Frey, 1983, 1984). The names of several cladoceran species are therefore subject to change. For example, there are several occurrence records of chydorids *Alona rectangula*, *Camptocercus rectirostris* and *Eurycercus lamellatus* in Canadian literature, but it is very unlikely that these species occur in North America (Frey, personal communication, Frey, 1982). There are also hundreds of records of the common chydorid cladoceran, *Chydorus sphaericus*, in Canadian literature. Frey (1980) showed that this species is not common in North America, and that what we have instead over much of the continent is a new species *Chydorus brevilabris*. This finding is supported in a recent Canada-wide survey

INTRODUCTION

La sous-classe des Branchiopodes comprend quatre ordres bien définis: les Anostracés, les Notostracés, les Conchostracés et les Cladocères. Les premiers ordres sont considérés comme primitifs et habitent de façon caractéristique des habitats temporaires, particulièrement au printemps et au début de l'été. On les trouve exclusivement en eau douce et il n'existe pas de vrai représentant marin; ils sont absents des eaux courantes. Les Anostracés ont des yeux composés pédonculés et n'ont pas de carapace. Les Notostracés ont des yeux composés sessiles et une grande carapace. Les Conchostracés sont comprimés latéralement, ont des yeux composés sessiles et une carapace formée de deux valves latérales. Les membres de ces trois ordres ont les appendices d'un aspect foliacé et sont donc parfois appelés collectivement phyllopodes, terme qui n'est pas utilisé actuellement dans la nomenclature systématique pour un groupe taxinomique bien défini.

Les membres de l'ordre des Cladocères (puces d'eau) fréquentent surtout les eaux douces, et on ne trouve que trois genres (*Podon*, *Evadne* et *Pleopis*) dans les mers canadiennes. Parmi les espèces d'eau douce, il y en a peu qui sont limnétiques, vivant dans la zone d'eau libre des lacs et ces dernières sont normalement très transparentes et presque incolores. La plupart se rencontrent dans les étangs ou la zone littorale d'importants plans d'eau et peuvent d'être d'une coloration jaune, brune ou rouge. Comme la plupart des études sur les eaux douces ont été effectuées en eau libre, un nombre disproportionnellement élevé de données d'observation dans cette synopsis ont trait à des espèces limnétiques, bien qu'elles soient relativement peu nombreuses.

La systématique des Cladocères d'Amérique du Nord a changé considérablement au cours des dernières décennies. Là où on croyait qu'un grand nombre d'espèces de cladocères étaient cosmopolites, des études récentes des genres répandus *Alona*, *Bosmina*, *Chydorus*, *Daphnia*, *Diaphanosoma* et *Eurycercus* ont démontré que la distribution de plusieurs espèces était assez circonscrite et limitée à certaines régions géographiques (Brooks, 1957; Chengalath et Hann, 1981A, 1981B; Deevey et Deevey, 1971; Frey, 1975, 1978, 1980, 1982; Korinek, 1981). Jusqu'à maintenant, on a prétendu que beaucoup d'espèces décrites en Europe se rencontraient également en Amérique du Nord. Cependant, une étude attentive et la comparaison des populations provenant des deux continents ont montré que plusieurs espèces sont en réalité différentes sur le plan morphologique (Brooks, 1957; Michael et Frey, 1983, 1984). Les noms de plusieurs espèces de cladocères sont par conséquent sujets à changement. Par exemple, il existe plusieurs données d'observation des chydoridés *Alona rectangula*, *Camptocercus rectirostris* et *Eurycercus lamellatus* dans les publications canadiennes, mais il est très peu probable que ces espèces se rencontrent en Amérique du Nord (Frey, communication personnelle; Frey, 1982). Il y a également des centaines de mentions du cladocère commun de la famille des chydoridés, soit *Chydorus sphaericus*, dans les publications canadiennes. Frey (1980) a montré que cette espèce n'est pas répandue en Amérique du Nord et que l'espèce que nous rencontrons à la place dans une bonne partie du continent est une nouvelle espèce, à savoir *Chydorus brevilabris*. Cette découverte est étayée

(Chengalath, 1982). The largest among the chydorids in size, and a common member of the littoral community, *Eurycercus* is now regarded as a highly differentiated genus. The very common species *Eurycercus lamellatus*, thought to have been present in North America, most probably does not occur here at all (Frey, 1975). The extreme morphological variability in the genera *Daphnia* and *Bosmina* has created confusion in their taxonomy and the species are notoriously difficult to delimit. The nomenclature of these two common genera is not fully stabilized and differences of opinion still exist among limnologists. Basically, I have followed Brooks (1957) for *Daphnia* and Deevey and Deevey (1971) for *Bosmina*, mainly because these exhaustive studies were based on North American material.

General information on the study of branchiopods, their structure, distribution, ecology, very interesting life history, and preservation methods is available from Brooks (1959) and Pennak (1978), as well as from a variety of text books on general invertebrates.

As far as possible original publications were consulted for verifications of spelling, author, and date of all names in this synopsis. Apart from the references mentioned above, the comprehensive works of Flossner (1972), Smirnov (1974, 1976), and Lilljeborg (1901) were also consulted. For synonymies in the Moinidae, I have relied mainly on Goulden (1968); and for the families Polyphemidae, Podonidae, and Cercopagidae, on Mordukhai-Boltovskoi (1968).

All Canadian occurrence records up to 1985 are given here. Three reports are included for 1986, of species new for North America. Every effort has been made to make this work complete. However, in dealing with such extensive literature, it is to be expected that omissions will have occurred.

In this *Synopsis Speciorum*, genera and species are arranged alphabetically by their currently accepted names within their respective families, which are also in alphabetical order. Below each species heading is a list of the names applied. Where a name is recorded followed by *AS*. . . (e.g., *AS* LEPTODORA KINDTII), this generally indicates that an incorrect spelling, such as a traditional variation or a typographical error, was used. In the case of uncertain species identification using an attribution of some form (for example: near, probably, cf., af.), the species is recorded under the generic name followed by *AS* and the format GENUS CF. SPECIES. To facilitate computer indexing, the expression cf. has been used regardless of the original form of the attribution in the literature.

Following the list of names applied is a notation as to the usual general habitat of the animal concerned. This has been limited to "marine", "brackish", "freshwater", or "saline lakes", or a combination of these terms. The geographic regions used are explained in the preface and are

dans un relevé récent réalisé à l'échelle du Canada (Chengalath, 1982). Le plus gros parmi les chydoridés et répandu dans la communauté du littoral, *Eurycercus* est maintenant considéré comme un genre très différencié. L'espèce très répandue, *Eurycercus lamellatus*, qu'on croyait présente en Amérique du Nord, ne se rencontre probablement pas du tout ici (Frey, 1975). La très grande variabilité morphologique des genres *Daphnia* et *Bosmina* a créé de la confusion en ce qui concerne leur taxinomie et les espèces sont connues pour être difficiles à distinguer. La nomenclature de ces deux genres communs n'est pas tout à fait fixée et il existe encore des divergences d'opinion entre les limnologistes. Dans l'ensemble, nous nous sommes fié à Brooks (1957) en ce qui concerne *Daphnia* et à Deevey et Deevey (1971) en ce qui concerne *Bosmina*, principalement parce que leurs études exhaustives étaient basées sur des spécimens nord-américains.

On peut obtenir des informations générales sur l'étude des branchiopodes, sur leur structure, leur distribution, leur écologie, leur cycle vital très intéressant et les méthodes de conservation en consultant Brooks (1959) et Pennak (1978), de même que divers manuels portant sur les invertébrés en général.

Dans la mesure du possible, nous avons consulté les publications originales pour vérifier l'orthographe, l'auteur et la date de tous les noms figurant dans cette synopsis. Mis à part les références susmentionnées, nous avons également consulté les travaux exhaustifs de Flossner (1972), Smirnov (1974, 1976), et Lilljeborg (1901). Pour ce qui est des synonymies dans la famille des Moinidés, nous nous sommes fié surtout sur Goulden (1968), et pour les familles des Polyphémidés, des Podonidés et des Cercopagidés, sur Mordukhai-Boltovskoi (1968).

Nous présentons ici toutes les mentions d'observation au Canada jusqu'à 1985. Nous avons inclus pour 1986 trois rapports portant sur les espèces nouvelles en Amérique du Nord. Nous avons tout fait pour que ce travail soit complet. Cependant, étant donné que la documentation est si abondante, il est à prévoir qu'il y aura des omissions.

Dans cette *Synopsis Speciorum*, les genres et les espèces, désignés par leur nom actuellement reconnu, sont disposés par ordre alphabétique à l'intérieur de leurs familles respectives, lesquelles sont données également par ordre alphabétique. La vedette de chaque espèce est suivie de la liste des noms usités. Lorsqu'un nom est suivi de la mention *AS*. . . (par exemple, *AS* LEPTODORA KINDTII), cela signifie généralement qu'une orthographe fautive, telle qu'une variante traditionnelle ou une erreur typographique, a été employée. Dans le cas des espèces douteuses identifiées à l'aide d'un déterminant (tel que "apparenté à", "probablement", "cf.", "d'après"), l'espèce est citée sous le nom générique suivi de *AS* et de la formule GENRE CF. ESPÈCE. Pour faciliter l'indexation automatisée, nous nous sommes servi du terme "cf.", sans égard à la forme originale de l'attribution dans la bibliographie.

La liste des noms en usage est suivie d'une note indiquant l'habitat général habituel de l'animal en question. Cette indication est limitée à "marine", "brackish", "freshwater", ou "saline lakes" ou à une combinaison de ces termes. Les régions géographiques citées sont définies

shown on the maps on the endpapers of this volume. Records which have no more geographic information than "Canada" are not included in this report.

To describe the context in which the species is discussed in each report, 16 general subject categories were designated:

Behaviour	Bibliography	Biochemistry	Development
Distribution	Ecology	Fisheries	Genetics
Life History	Morphology	Pathology	Physiology
Systematics	Taxonomy	Techniques	Toxicology

While it is recognized that any division of this nature is arbitrary, these categories taken together seem to cover the field fairly completely with a minimum of overlap. Records may be listed under more than one category.

Complete bibliographic citations for most references on the Canadian aquatic invertebrates published prior to 1977 may be found in *Index Bibliographicus*, Volume 2 of *Bibliographia*. This *Synopsis Speciorum* lists all of the references retrieved to date pertaining to Branchiopoda including those that are re[illegible]led in *Index Bibliographicus*. Journal titles have been abbreviated according to the *Serial Sources for the BIOSIS Data Base* (1981); for older journals and non-standard publications we have used the *BIOSIS* conventions for abbreviation, and formats suggested by our librarians. Further information on our bibliographic methods is given in the Introduction to Volume 2 of *Bibliographia*.

Acknowledgements

I wish to express my indebtedness to the following persons who have been so generous with their time and interest, either in discussing systematic and nomenclatural problems or by providing old literature, and for verification of authors and dates for species names: Dorothy Berner, Temple University, Philadelphia, U.S.A.; John Carter and Herbert Fernando, University of Waterloo, Waterloo, Ontario; David Frey, Indiana University, Bloomington, Indiana, U.S.A.; Paul Hebert, University of Windsor, Windsor, Ontario; Ulrich Lieder, Institut fur Binnenfischerei, Bierhn-Friedrichshagen, DDR; Kazimierz Patalas, Freshwater Institute, Winnipeg, Manitoba.

It is a pleasure to express my gratitude for help and advice to Wendy Antoine, Diana Laubitz, and Chang-tai Shih, all of the National Museum of Natural Sciences and to Ian Sutherland, Canadian Heritage Information Network. I acknowledge my debt to Ian Sutherland for preliminary work on Anostraca, Conchostraca, and Notostraca. Thanks are due to Diana Laubitz for assistance in the uninspiring task of checking the proof and to Rolande Gaulin for typing the manuscript.

dans la préface et sont représentées sur les cartes des pages de garde de ce volume. Les ouvrages dont l'information géographique se limite au "Canada" ne sont pas citées dans la synopsis.

Pour décrire le contexte dans lequel s'inscrit l'analyse des espèces dans chaque compte rendu, seize grands domaines ont été retenus:

Comportement	Bibliographie	Biochimie	Développement
Répartition	Écologie	Pêcheries	Génétique
Cycle vital	Morphologie	Pathologie	Physiologie
Systématique	Taxinomie	Techniques	Toxicologie

Bien que nous reconnaissions le caractère arbitraire de toute division de cette nature, ces catégories prises dans leur ensemble paraissent couvrir assez bien toute l'étendue du sujet avec un minimum de chevauchement. Les documents peuvent être cités sous plus d'une catégorie.

On pourra trouver dans l'*Index Bibliographicus*, le Volume 2 de la *Bibliographia*, les citations bibliographiques complètes de la plupart des ouvrages publiés sur les invertébrés aquatiques du Canada avant 1977. La présente *Synopsis Speciorum* contient une liste de toutes les références bibliographiques utilisées à date qui ont rapport aux Branchiopodes, y compris celles enregistrées dans l'*Index Bibliographicus*. Les titres de revues ont été abrégés d'après la *Serial Sources for the BIOSIS Data Base* (1981); pour les revues plus anciennes ou les publications sortant de l'ordinaire, nous avons employé les formes d'abréviations données dans la *BIOSIS* et des formules proposées par nos bibliothécaires. Une explication détaillée de nos méthodes bibliographiques se trouve dans l'Introduction du Volume 2 de la *Bibliographia*.

Remerciements

Nous désirons exprimer notre reconnaissance aux personnes suivantes qui n'ont pas ménagé leur temps et leurs efforts, soit pour discuter des problèmes de systématique et de nomenclature soit pour nous fournir des ouvrages anciens, ainsi que pour la vérification des auteurs et des dates concernant les noms d'espèces, à savoir Dorothy Berner, Université Temple, Philadelphie, É.-U.; John Carter et Herbert Fernando, Université de Waterloo, Waterloo (Ontario); David Frey, Université de l'Indiana, Bloomington, Indiana (É.-U.); Paul Hebert, Université de Windsor, Windsor (Ontario); Ulrich Lieder, Institut fur Binnenfischerei, Bierhn-Friedrichshagen, RDA; Kazimierz Patalas, Institut des eaux douces, Winnipeg (Manitoba).

Nous exprimons notre gratitude pour leur aide et leurs conseils à Wendy Antoine, Diana Laubitz et Chang-tai Shih, du Musée national des sciences naturelles et à Ian Sutherland, du Réseau canadien d'information sur le patrimoine. Nous sommes redevable à Ian Sutherland pour le travail préliminaire sur les Anostracés, les Conchostracés et les Notostracés. Des remerciements vont à Diana Laubitz pour l'aide apportée dans la tâche ingrate de vérifier l'épreuve et à Rolande Gaulin pour avoir dactylographié le manuscrit.

Acknowledgements are due to Nishi Sharma and Penelope Adams who did the basic literature search; to Wendy Antoine who coordinated and entered the data into the computer; and to Arch Stewart who organized our computerized literature searches, and helped us to compose citations for some of the more obscure and problematic publications. Special thanks go to the staff of the Canadian Heritage Information Network for their help with the computerization, and in particular: Ray Bellamy and Bill Selkirk, for their programming; and Jane Sledge, Claire Trepanier, Merridy Cox, Margaret Keay, Steve Delroy and Carole Daoust for their assistance and advice. For permission to use the unpublished contents of the manuscript reports produced by the Department of Fisheries and Oceans appreciation is expressed to: E.B. Dunne, Newfoundland Region; A.W. Mansfield, Arctic Biological Station; K.E. Marshall, Freshwater Institute; D.J. Scarratt, St. Andrews Biological Station; and J.A. Thomson, Pacific Biological Station.

Nous tenons à exprimer toute notre gratitude à Nishi Sharma et à Penelope Adams qui ont fait le dépouillement de base des références; à Wendy Antoine qui a coordonné les données et les a introduites dans l'ordinateur; et à Arch Stewart qui a organisé nos recherches documentaires informatisées, et qui nous a aidé à composer les inscriptions pour des publications plus obscures ou discutables. Nous désirons remercier tout spécialement le personnel du Réseau canadien d'information sur le patrimoine, et en particulier: Ray Bellamy et Bill Selkirk pour leur travail de programmation; et Jane Sledge, Claire Trepanier, Merridy Cox, Margaret Keay, Steve Delroy et Carole Daoust pour leur aide et leurs conseils. Nous savons gré à E.B. Dunne, de la région de Terre-Neuve, à A.W. Mansfield, de la Station de biologie arctique, à K.E. Marshall, de l'Institut des eaux douces, à D.J. Scarratt, de la Station de biologie de St. Andrews et à J.A. Thomson, de la Station de biologie du Pacifique, de nous avoir autorisé à utiliser le contenu inédit des études manuscrites produites par le ministère des Pêches et des Océans.
